

VANS DR-400 (pressing oil)

ATTRIBUTE

DR-400 is a professional PRESS oil which is developed for characteristics of plastic working and it shows excellent workability. DR-400 is a product developed to improve productivity by decreasing frictional resistance and lengthening the mold life by forming a coating with strong lubrication function.

DR-400 is easy to clean with water-soluble detergent and solvent.

In addition, the excellent work performance reduces the air pressure of the press to increase the working speed and does not cause the leftover burned oil & oil stain by the heat of processing.

DR-400 is suitable for PRESS work for the cold rolled steel sheet and does not cause stain on material surface.

PAX

Properties	VANS DR-518S
Appearance	Light yellow transparent
Specific Gravity (20 °C)	0.909
Coefficient of Friction	0.12 μm
Flash point (COC)	220 °C
Kinematic Viscosity	50 cSt
Copper Corrosion (100 °C)	1a

APPLY

Shallow drawing of cold-rolled steel plates (3T to 5T)

Deep drawing of cold rolled steel sheet (1T ~ 3T)

Motor Case Type Press

Car Body Structure Press

PACKAGING

PACKING	CAPACITY
Drum	200L
Pail	20L
